(if required to help hold
the end of the tape)

Reveal vs. Face Fitted

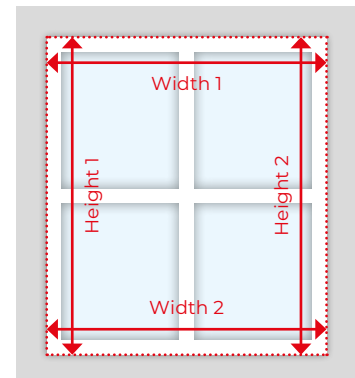

The first thing you will need to decide is if you want the blind installed inside of the window reveal, or if you want it face fitted. If it's the latter, we suggest adding 100mm on the width and on the drop to ensure full coverage. The factory can do this calculation if the measure sheets indicates which method you are wanting.

Corner Windows

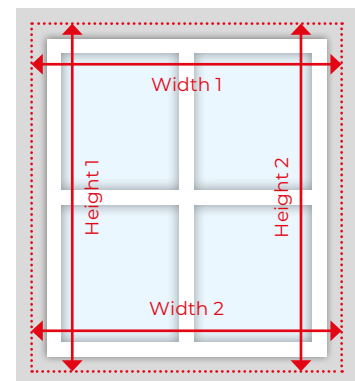

For corner windows, there are some reductions in the measurements required. This reduction can be done by the factory using the measurements supplied by you, just make sure you tell us that this is for a corner. Supply a diagram of the window if you can as well.

Measure Twice!

For width measurements, measure once at the very top of the window and once at the very bottom of the window. Similarly, for height (drop) measurements, measure once from the very left and once from the very right. Write both sizes on the measuring sheet, however if there is a difference of more than 3 or 4mm between the two, measure both again.

Reveal Fitted

Face Fitted
(100mm clearance)

		Top		Left		Left / Right		→		←	Reveal / Face
		Bottom		Right				↑		↑	
		Top		Left		Left / Right		→		←	Reveal / Face
		Bottom		Right				↑		↑	

Please note that if there is a tile on the inside of the reveal, you will need to show this on the measure sheet. For example, if the tile is 10mm thick, then add 10mm in the "Cut out left" → column, and if the tile is 100mm from the window sill, then write 100mm in the "Cut out left" ↑ column. Do this for both sides.
